VIDEO - AUDIO - PATIENT VITALS - REMOTE CARE

Virtual House-Calls
Real-Time Remote Patient Vitals

REMOTE MONITORING FOR:

- CHF
- CVD
- COPD
- DIABETES
- HYPERTENSION
- OBESITY
- ULTRASOUND

- FULLY TESTED AND APPROVED HIPAA -HITECH COMPLIANT SYSTEM

HNC Telemedicine Solutions connect patients and care-providers instantly, wirelessly, globally.

The HNC Home Patient Monitoring system allows a chronic or acute state patient to discharge and return to the comfort of their home without losing their connection to the health professionals who manage their care.

Patients easily visit their healthcare professionals, send their vitals and receive home video consultation and care... a proven recipe for improved care and patient outcomes. All patient vitals are transmitted via trends, graphs and reports to care providers.

IN-HOSPITAL PATIENT CARE

HNC In-hospital solutions allow Physicians to conduct virtual rounds and care for their patients regardless of where the patient or care-provider are located in the world.

Video conferencing with patients while viewing real-time vitals and visual condition allow for truly un-matched care. Improved patient outcomes, substantial reductions in the cost of care and unprecedented access to Physician Specialists are the core of the HNC Solutions.

HNC TELEMEDICINE SOLUTIONS...
SETTING THE STANDARD FOR REMOTE PATIENT MONITORING.

"Connecting The World... One Patient At A Time"
