Empowering Smarter Environmental Decisions for Michigan

RIDE Mapper

Michigan Department of Environment, Great Lakes, and Energy

[Dashboard](#)

About the Map

The RIDE Mapper is an online application that allows users to view sites of environmental contamination under Part 201, leaking underground storage tank sites (both open and closed) regulated under Part 213, and underground storage tank facilities (both active and closed) regulated under Part 211.

In addition, users can view any land use or resource use restrictions imposed on a property that has been provided to EGLE. Users can search and display sites based on city, county, EGLE district, and/or Michigan legislative districts. Internal map functions allow the user to view and search for sites within a certain distance, lot of land, or stream segments.

As the name indicates, RIDE Mapper has strong connections to the [Remediation Information Data Exchange](#). RIDE Mapper shows the locations of facilities regulated by RRD. Basic site information and attributes about facility locations are available in RIDE Mapper, but more detailed site information is available in RIDE.

Help

- Visit our [How to Use Guide](#) for help using this application.
- Email EGLE-RRD-RIDE-Mapper@Michigan.gov for questions about map content.
- Email EGLE-Maps@Michigan.gov for map feedback.
