

FUNDING REQUEST

To: Senator Joe Bellino, 16th District
 From: Jeremiah J. Hodshire, President & CEO *J. Hodshire*
 Date: April 14, 2025
 Re: Funding Opportunity for Hillsdale Hospital

Thank you very much for your continued support and advocacy of rural healthcare in Michigan, you continue to be a friend to our industry and we appreciate the time you have spent on our campus and learning about our challenges/needs. The following represents the most significant projects that Hillsdale Hospital cannot fund on our own:

PROJECT DESCRIPTION	TOTAL COSTS
----------------------------	--------------------

Implementation of in-patient EMR from CPSI to EPIC	\$2,146,644
---	--------------------

Electronic Medical Record will provide continuity of patient care between Hillsdale Hospital, their community clinics and providers and any other facility in the country that has the EPIC EMR platform.

Facilities Upgrade.....	\$1,990,970
--------------------------------	--------------------

Mental Health ER Room Renovations for placement of behavioral health patients awaiting transfer or admitted. Creation of a 5th critical care room for delivering life saving services to acute patients. Replace medical air scroll compressor for OR & ER areas. Upgrade 2 North additional elevators for new code. Modernize controls and install VAV on 1976 AHU Units. Electrical infrastructure revival. Core Firewall/switch. ER Flooring.

Fluoroscopy Procedure Room	\$ 700,000
---	-------------------

This will allow Hillsdale Hospital to construct a procedure room for a new fluoroscopy machine, which is an imaging modality that uses x-rays to allow real-time visualization of body structures. During fluoroscopy, x-ray beams are continually emitted and captured on a screen, producing a real-time, dynamic image. The current room lacks the space and functionality necessary for patient throughput.

Purchase of C-Arm & Portable X Ray Machines.....	\$ 365,000
---	-------------------

The C-Arm is commonly used for intraoperative imaging and in the fields of orthopedics, traumatology, vascular surgery, and cardiology. The purchase of this unit will allow HH to replace end of life equipment replacing with new technology that can expand services.

Patient Electronic Monitoring System	\$ 330,000
---	-------------------

Purchase of Mindray patient monitoring system for smart, intuitive patient monitoring with flexible interoperability options can help streamline patient assessment/treatment and prioritize clinicians' time to deliver high-quality, patient-centric care.

TOTAL:	<u>\$5,532,614</u>
---------------	---------------------------
