Subject: DTE Smart Meter Threat 87 Years Old

Complaint:

I do not want a smart meter because they are known to emit radiation, limit our privacy, and sometimes cause fires. For three years I had a lock on my analog meter and each month I would send a meter read to DTE. In the summer of 2017 (July, I think), I received a letter from DTE demanding that I remove the lock and accept a smart meter. If I did not do this, they threatened to cut off my electricity. I am 87 years old. I cannot be without power. I removed the lock, and taped a note on my analog meter expressing my feelings about being forced to accept a smart meter.

I attended a meeting in Lansing, and listened to the testimonials of those whose health has deteriorated since a smart meter was placed on their homes. GM waited 10 years before it addressed the problems with the faulty ignition switches, and spent billions on law suits. I believe those whose health has been affected by smart meters are simply the 'canaries in the coal mine' and that sooner or later all of us will be suffering from the effects of the radiation emitted by smart meters. I also believe that we should have the right to keep our analog meters if we want to. Why can't DTE allow this?
